

## QGIS Application - Bug report #18325

### Feature form is not remmebering last configuration

2018-03-04 09:23 AM - Dan Isaacs

<b>Status:</b>	Closed	
<b>Priority:</b>	High	
<b>Assignee:</b>		
<b>Category:</b>	GUI	
<b>Affected QGIS version:</b>	3.0.0	<b>Regression?:</b> Yes
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> fixed/implemented
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 26215
<b>Description</b>		
<p>In Previous versions, the feature form that pops up with the information tool or new feature creation would remember the previous size and position. In Qgis 3 it no longer seems to. This is a retrograde step as it makes the whole ability to lay out the feature form in columns and sub-groups pointless as they end up off screen.</p>		

#### History

##### #1 - 2018-03-04 10:11 AM - Giovanni Manghi

- Easy fix? changed from Yes to No
- Category changed from Forms to GUI
- Priority changed from Normal to High

##### #2 - 2018-03-05 04:28 PM - Francisco Pérez Sampayo

Actually, qgis3 remember the size and position at feature level. Maybe it could be better at layer level?

Yes, I have a file with several hundred features and to set them all to the size I need them is unnecessarily onerous. I can't really see the value in having them set by feature as the default.

##### #4 - 2018-04-19 01:58 PM - Nyal Dawson

- Resolution set to fixed/implemented
- Status changed from Open to Closed

That's already fixed in 3.0.1
