QGIS Application - Bug report #18372
Adding new dxf to canvas problem QGIS3.0

2018-03-07 11:26 AM - PJ Lightning

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Vectors		
Affected QGIS version:	3.0.0	**Regression?:**	Yes
Operating System:	win7 Pro 64bit	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	not reproducable
Crashes QGIS or corrupts data:		**Copied to github as #:**	26262

Description

I added several map dxfs and grouped them.
I go to add another dxf as a new layer by right clicking on the file (redline.dxf) in the browser, but instead of adding it as a new layer it's inserting it as some kind of subgrouped attribute within the group. (See the light grey text which has appeared under the cords county_Bdy, which is par of a different dxf. in the Layers window.)

Does it work as expected on 2.18?

Yes. When I couldn't get it working in 3.0 I had to start the project from the beginning in 2.18. Adding the dxf in the same manner makes a new layer.

Could you please check again on current release?
Thanks.

Please change status to "feedback" when needed.

#6 - 2019-03-09 04:48 PM - Giovanni Manghi

- Status changed from Feedback to Closed

- Resolution set to not reproducable

Closing for lack of feedback.
