Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 26335
Description		
I have joined two layers (point (Geopackage or Spatialite) joined with a table (no geometry)). Each layer has a lot of fields. When I save a new added point I get the message "Object has too many attribute". Saving works. It works with QGIS 2.18 but not with 3.0 _Ich habe zwei Layer (Punkt (Geopackage oder SpatiaLite) mit einer Tabelle (keine Geometrie) verbunden (Beziehung und Verknüpfung)). Jeder Layer hat viele Felder. Wenn ich einen neu hinzufügten Punkt speichere, erscheint die Meldung "Objekt hat zu viele Attribute, erwarte 47, empfangen 141". Speichern funktioniert. Es funktioniert mit QGIS 2.18, aber nicht in 3.0_
