

QGIS Application - Bug report #185

values proj out of boundary

2006-07-10 04:24 AM - dbsint-gmail-com -

Status:	Closed	
Priority:	Low	
Assignee:	Gavin Macaulay -	
Category:	Projection Support	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10244
Description		
<p>if there are values out of boundary (-180, +180) or on edge in the layer (+proj=longlat +ellps=WGS84 +datum=WGS84 +no_defs) and this layer is shown in another projection (+proj=robin +lon_0=0 +x_0=0 +y_0=0 +ellps=clrk66 +datum=NAD27 +units=m +no_defs), the result will be ...</p> <p>http://img99.imageshack.us/img99/3414/qgis6as.gif</p> <p>Dmitry.</p>

The problem here is that projecting from the lat/longs in the mapinfo file to the other projection is not valid when longitudes are greater than 180 (or less than -180). It's more of a problem with the proj4 library than qgis itself.

You can get around this by changing the +lon_0 paramater to be a bit further to the east. For example, setting it to 90 gives a projected map that looks fine.

Thanks to help. I'm closing this bug.

Dmitry.
