

QGIS Application - Bug report #18563

QGIS3 crashes when saving to an existing BNA file

2018-03-28 06:44 AM - Kim Frankcombe

Status:	Closed	
Priority:	High	
Assignee:	Even Rouault	
Category:	Data Provider/OGR	
Affected QGIS version:	3.0.0	Regression?: No
Operating System:	Ubuntu 16.04	Easy fix?: Yes
Pull Request or Patch applied:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 26451
Description		
<p>If I select a vector layer and from the right click menu, Save As a BNA file, the file is created as expected. However if I then edit the vector layer in QGIS and save again to the same BNA file, QGIS crashes. If I delete the BNA file outside of QGIS before resaving all works fine. If I use a different name for the Save As all works fine.</p> <p>When saving I turn off the option to load the saved layer back to QGIS and just in case it has any bearing on the result, I change the output Coordinate Precision to 0 as the values are UTM co-ords and only good to 50m anyway.</p>
