Category:	Processing/QGIS			
Affected QGIS version:	2.18.17	**Regression?:**	No	
Operating System:	Windows 7	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	26530	

Description

Given a QGIS project (2.18.17) with two memory layers of type polygon with the same CRS and differnte layername, I've tried to use Vector Geometry Tools > check validity on both layers but it perform the check and show results always in the same layer.

No problem with two layers with different SRS.

In attached screenshot memory2 and memory3 has the same errors, output results against memory2 shows results of memory1
