QGIS Application - Bug report #18679
Cannot insert decimal separator to field

2018-04-10 10:37 AM - David Pavlicek

Status:	Closed		
Priority:	High		
Assignee:	Alessandro Pasotti		
Category:	Edit widget		
Affected QGIS version:	3.0.0	**Regression?:**	No
Operating System:	Windows 7 64 bit	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:		**Copied to github as #:**	26567

Description

Hi, I have PostGIS based layer with numeric field. When i try to edit this field, it is not posible to insert (copy nor write) numbers with decimal separator. Only integer values are alowed. I try use dot as well as comma but with no luck. Also tried to switch QGIS language from United States to my system locale (Czech), but this also didn't work.

Postgres field definition is plain numeric (no scale a precision defined)
QGIS field definition said: double, numeric, -1, -1

It works fine in 2.18.14 (with dot or even comma). Same database, same table, same field.

I cannot reproduce in current master, would you be able to test a nightly build?

If that still does not work, please attach a minimal project and data (pg_dump) to reproduce the issue.

#2 - 2018-04-13 08:45 AM - David Pavlicek

I have tested this against latest nightly build from OSGeo (3.1.0-master 4c8b1595a9) with same results...

BUT, after bit of fiddling with this, I thing that real isuue is how editing plugin handles decimal number fields without scale and precision in conjunction with system (Windows) decimal separator settings. When I try to edit decimal number with -1 in scale and precision and with comma (,) as system decimal separator, it does not work! No matter of source layer type (tested with Postgres, shape and memory layer). There is matrix of all data types I have tested with comma as system decimal separator:

numeric(10,5) - WORKS
numeric(-1,-1) - BROKEN
decimal(10,5) - WORKS
real(-1,-1)   - BROKEN
double(-1, -1) - BROKEN

When I set system decimal separator to dot (.) everything works... Unfortunately, I cannot simply change my system settings permanently because there

are lot of other applications and systems that expects comma as system decimal separator (it is default for my locale).

Hope this helps

Thanks for the feedback,

So, basically, the problem looks like that the default editor widget for numeric does not take into account your operating system locale decimal separator setting?

How are the locale settings in QGIS options?

Would you mind attaching a small screenshot so that I'm sure we are looking to the same widget?

#4 - 2018-04-13 10:00 AM - David Pavlicek

- File qgis_locale_setting.png added

- File layer_definition.png added

- File layer_form.png added

- File system_locale_stting.png added

There are screenshots of my system settings, QGIS settings, Layer definition and its Feature form where i try to put in 123.45 (123,45 respectively)...

- Resolution set to not reproducable

Sorry: I tested this again but I wasn't able to reproduce it on Linux with latest master: I also have "," as a decimal separator and I'm testing with a PostGIS DB with a "numeric" "-1" "-1" field configuration (just like your attached images).

What happens in my tests is that I can enter a number with both (. and ,) as decimal separator: whenever I press a "," it gets automatically converted to a ".".

I don't how or whether this is linked (sorry if it is not) but in another context, i have issues with dot being recognized as decimal separator when editing text box (see #18656).

#7 - 2018-05-03 08:14 AM - David Pavlicek

Hi again,
i suppose that this issue is specific for Wondows OS and locale with comma as decimal separator. I was able to reproduce it on every machine with Windows (7 or even 10) in our office.
