QGIS Application - Bug report #18714 QGIS crashes when opening a project having joined layers with spaces in names

2018-04-12 01:12 AM - Nikolay Lebedev

Status: Open Priority: Normal

Assignee: Matthias Kuhn
Category: Relations

Affected QGIS version:3.0.0Regression?:NoOperating System:Easy fix?:No

Pull Request or Patch supplied: Resolution:

Crashes QGIS or corruptesdata: Copied to github as #: 26601

Description

Steps to reproduce:

Add two layers to the project.

Add a space in layer name for one layer (i.e. "my layer").

Join this layer to another one, so that join has a space in it's name.

Save and close the project, open again - boom.

Should be an easy fix with using layer id's etc. instead of names with spaces.
