

QGIS Application - Bug report #18720

QGIS 3.0.1 crashes on Mac

2018-04-13 07:03 PM - Adam Dershowitz

Status: Closed	
Priority: Normal	
Assignee:	
Category: mac_os_specific	
Affected QGIS version: 3.0.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: not reproducible
Crashes QGIS or corrupts data: Yes	Copied to github as #: 26607
Description	
<p>I have installed QGIS 3.0.1 on my mac using Macports. Since upgrading to 3.0.1 it crashes any time I try to open a file. If I just open QGIS it seems to open, but if I try to add a layer the Data Source Manager opens. If I then click on the three dots to select a file, it immediately crashes.</p> <p>If instead I try to open an existing project each time, it opens some layers, but also shows a "Handle Bad Layers" dialog box. The layer that shows is actually valid (and worked with version 2). If I click browse to find that layer it crashes as above. If I just don't open that layer, I can see the other layers of the project, but can't add any layers.</p> <p>The above makes 3.0.1 completely unusable.</p>

- File qgis3-crash.log added

I have the same problem; have tried uninstalling and reinstalling all GIS libraries, and updating to 3.0.1_20180410. Error log is attached.

there is a tutorial to install QGIS3 with MacPorts

<https://www.3liz.com/blog/rldhont/index.php?post/2017/06/01/How-to-build-qgis-on-OSX-with-MacPort>

Do you still experience the issue?

It seems that this bug has been fixed. I'm now using 3.2.2 from MacPorts, and I don't see this problem any longer, so it was only present in 3.0.1.
