<b>Operating System:</b>	openSUSE 42.3	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> no timely feedback
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 26608
<b>Description</b>		
<p>Hello,</p> <p>I've been a user of QGIS for geologic mapping purposes for a few years now. Recently I've switched my primary machine from Windows to openSUSE Linux (Leap 42.3). Initially I had no issues, however, I recently did a fresh install and have been trying to re-install QGIS. My issue is that although it installs none of the drop-down menus appear to be functional. This includes right clicking on layers, the main toolbar at the top, and any of the menus within the properties dialog box etc. When I click these the menu title appears to be depressed however nothing appears below. When right clicking nothing happens.</p>		

### History

#### #1 - 2019-01-21 12:35 AM - Jürgen Fischer

- Status changed from Open to Feedback

Please test with QGIS 3.4 - QGIS 2.18 reached it's end of life.

#### #2 - 2019-03-08 11:03 AM - Giovanni Manghi

- Resolution set to no timely feedback

- Status changed from Feedback to Closed

Closing for lack of feedback.
