QGIS Application - Bug report #18746
QGIS 3 crashed

2018-04-18 11:12 AM - Benoit de Cabissole

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Actions			
Affected QGIS version:	3.0.1	**Regression?:**	No	
Operating System:	M$ Windows10	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	26633	

Description

Following instructions on the ":(QGIS Crashed" dialog, the crash report is attached...

Occurred when trying to remove a group of 50something shapefiles. The group is the first in the layers tree. The only other element in the tree is an other empty group.

Each shapefile is very simple 4 points polygon with no attribute. The group is visible as well as most of the shapefiles in it.

Before crash, loading, displaying and removing of a substantial amount of shapefiles and geotiffs occurred.

History

#1 - 2018-07-20 09:04 AM - Nyall Dawson

- Resolution set to fixed/implemented

- Status changed from Open to Closed

Likely fixed in 3.2.1
