| Description   |                |                              |
| <p>I'm doing some spatial join and it fails due to invalid geometry. In the Log panel, the message is</p> <div><p><i>Feature (36802) has invalid geometry. Please fix the geometry or change the Processing setting to the "Ignore invalid input features" option.</i></p></div> <p>Execution failed after 2.83 seconds</p> <p>It could be nice to also indicate from which layer the broken feature comes.</p> |                |                              |
