QGIS Application - Bug report #18787
[Layout] no way to identify/interact with a group when it's another group subitem

2018-04-22 10:30 AM - Harrissou Santanna

Status:	Open			
Priority:	Normal			
Assignee:

Affected QGIS version:	3.1(master)	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**		
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	26674	

Description

In a print layout add a couple of items, select them and right-click, group them (groupA)

Selecting the group shows dotted boundaries of its items

Now create a new item and group it with the previous group --> groupB

Select the new group: it'll show boundaries of ALL the items (and not its direct children, namely the first group groupA and the last item) --> bug?

Deselect groupB and Select the groupA in the Items panel (as it can't be selected in the canvas): nothing is displayed (nota: if you select groupA just after groupB without deselection or another item selection, it shows groupB boundaries, which is also wrong).
