

QGIS Application - Bug report #188

Edits of an added feature do not commit

2006-07-11 06:45 PM - Brendan Morley -

Status:	Closed	
Priority:	Low	
Assignee:	Gary Sherman	
Category:	Digitising	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 10247
Description		
<p>In theory, if you add a feature to a layer, then show that layer in the attribute table, then edit an attribute of the new feature, then Stop Editing, then save your changes, the changed attribute values will not get committed.</p> <p>The bug appears to be in the following if{} block illustrated in: http://svn.qgis.org/trac/browser/trunk/qgis/src/gui/qgsvectorlayer.cpp?rev=5584#L3358</p> <p>This may not actually be a bug, but it didn't look right, and I don't have time to investigate at the moment.</p>

This works for me. I just edited an attribute value of an uncommitted feature. Did you do anything special to get the bug?

Marco

#2 - 2006-07-23 08:10 PM - Brendan Morley -

- Resolution set to invalid

- Status changed from Open to Closed

I'll close as it was a theoretical bug. In fact, I looked a little further and realised that the assumption made in the original code passage was valid.
