

QGIS Application - Bug report #18897

can't see layers on canvas loaded from XYZ Tiles in QGIS 3 on Mac

2018-05-02 11:36 PM - Russell Fulton

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Web Services clients/XYZ	
Affected QGIS version:	3.1(master)	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 26729
Description		
<p>I am trying to load background map from OSM and having problems. The data source browser->XYZ Tile comes 'pre loaded' with a link for standard OSM and this works fine.</p> <p>When I try to add a new source (right click -> new connection...) and fill out the dialogue with the Tile url from OSM the item appears in the menu but when I click on it I get a legend entry but no layer is displayed.</p> <p>I have looked through the message but could not find anything relevant.</p> <p>I posted a question to stackGIS https://gis.stackexchange.com/questions/281365/trouble-using-xyz-tiles-in-qgis-3-on-mac and got one suggestion to try changing the CRS of the canvas to match that of the background layer but that had no effect.</p> <p>I have also tried Thunderforest links with api key but got the same result.</p>		

History

#1 - 2019-03-01 11:07 AM - Johannes Kroeger

- Resolution set to invalid
- Status changed from Open to Closed

This was a user error and sadly the submitter was not caring enough to mark it as solved here or at their GIS.SE question:
