

QGIS Application - Bug report #1890

GRASS plugin fails to read raster / vector data on windows xp and vista

2009-08-24 03:32 AM - doon75 -

Status: Closed	
Priority: Low	
Assignee:	
Category: Build/Install	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: wontfix
Crashes QGIS or corrupts data:	Copied to github as #: 11950
Description	
<p>using standalone installer only.</p> <p>When I start, QGIS can't find GRASS (GISBASE), so I manually point it to "C:\\Program Files\\QuantumGIS\\grass".</p> <p>Try to load a GRASS raster and now "C:/Users/Darren/Documents/GIS [[DataBase]]/test/PERMANENT/cellhd/comp543" is not a valid or recognized raster data source".</p> <p>I had the same issue with QGIS 1.0.2-Kore. Uninstalled QGIS (via control panel - remove programs) and then installed 1.1.0.....</p> <p>So far everything else seems to be fine (projects open fine, GPS plugin etc).</p> <p>see additional comments in: http://forum.qgis.org/viewtopic.php?f=2&#38;t=4761</p>

the

"is not a valid or recognized raster data source" is/was a typical error message when using an outdated/bugged version of gdal.

Qgis 1.2 should be out in a few days, meanwhile please give a try to the dev version installable trough the osgeo4w installer (I guess you should uninstall first the standalone installer).

Please also report back after testing. Thanks

I'll wait for the 1.2 standalone.

As reported <http://forum.qgis.org/viewtopic.php?f=2&t=4761> installing through the osgeo4w installer seems to address the issue.

Not an option for me as my internet connection is limited. I am entirely dependent on the standalone.

- Resolution set to wontfix

- Status changed from Open to Closed

Ok, I'll close then. Please test qgis 1.2 as soon as it will be out and then reopen the ticket if necessary.
