

QGIS Application - Bug report #18906

GDAL Geo-referencer no longer opens

2018-05-03 06:30 PM - Matthew Bodnar

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	C++ plugins/Georeferencer	
Affected QGIS version:	3.0.2	Regression?: No
Operating System:	WIN 10 1709	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 26738
Description		
<p>I cannot re-create this issue.</p> <p>At some point when modifying settings in the 'default' user profile I was not longer able to open the 'GDAL Georeferencer' core plugin.</p> <p>The plugin remains installed and visible on the toolbar, but nothing happens when clicked.</p> <p>I attempted to disable and re-enable the core plugin without effect.</p> <p>The only solution was to delete the default profile "QGIS" folder with the .ini config file.</p> <p>(Or to delete any reference to the 'Georeferencer' in the .ini file via text editor.)</p>
