

QGIS Application - Bug report #18924

Measurement tool window not visible

2018-05-07 10:50 PM - Daniel Boyd

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	3.0.2	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 26756
Description		
<p>When I switch from a multiple monitor configuration to a single monitor configuration (or even a different multimonitor configuration), the measurement tool frequently opens up off-screen and there is no way (that I have seen) to get it back.</p> <p>The only solution I've found is to go back to the original monitor configuration. This is particularly troublesome for users with docked laptops where the monitor configuration changes frequently.</p> <p>Steps to reproduce:</p> <ol style="list-style-type: none">1) Using multi-monitor setup, open measurement tool and move measurement window to a second screen2) Disconnect second screen3) open measurement tool; measurement window is not visible

Would be nice to dock the geodesic measurement tool window as a panel in the sidebar, instead of having it flying around and obstructing the map.

The panel should then just get the focus ("jump" forward) if it is in a panel group when the measurement tool is clicked.
