QGIS Application - Feature request #18944
Improvement for Batch Processing

2018-05-13 02:22 AM - Nicolas Cadieux

Status:	Open		
Priority:	Normal		
Assignee:			
Category:	Processing/GUI		
Pull Request or Patch supplied:	No	**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	26775

Description

We should be able to select all or multiple layers and select a field parameter once that will apply to all selected layers. Same thing for adding layers from the project. We should be able to select multiple layer and then click only once for all layers to be added.

It would be nice to be able to add fields or parameters when these are missing in the GUI (like for buildVRT raster where many if not most parameters are missing making the module unusable for anything complicated).

We should be able to drag and drop layers into the Batch processing windows from the Layer Panel.

There are a lot of request in this single report ;) I wonder if some are not already covered by the dialog (see
https://docs.qgis.org/testing/en/docs/user_manual/processing/batch.html)
