

# QGIS Application - Bug report #18960

## Unpinned labels jump to wrong place when moved

2018-05-15 07:40 PM - Nathan Perry

<b>Status:</b> Open	
<b>Priority:</b> Normal	
<b>Assignee:</b>	
<b>Category:</b> Labelling	
<b>Affected QGIS version:</b> 3.0.2	<b>Regression?:</b> No
<b>Operating System:</b> Mac OS 10.13.3	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b> No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b> No	<b>Copied to github as #:</b> 26791

### Description

When moving an unpinned label (using auxiliary field labeling), the label jumps to a place too low on the map canvas. It does not follow the cursor location or selection box. See the attached screencast for an example: I move the first label downward and it jumps too far down; I move the second slightly upward, but it also moves down.

This issue does not occur with labels that are already pinned, or with unpinned labels using data-defined labeling.

### History
