

QGIS Application - Bug report #19069

Copy attribute / Copy feature attributes doesn't return value if value is URI

2018-05-30 07:16 PM - James Passmore

Status:Open Priority:Normal Assignee: Category:Unknown Affected QGIS version:3.0.3 Operating System:Windows Pull Request or Patch supplied: Crashes QGIS or corrupts data:	Regression?:No Easy fix?:No Resolution: Copied to github as #: 26899
Description When using the identify tool, and looking at the values of a feature in the Identify Results window, I can right click and copy the attribute value when the value is plain text or a number, but not when the value is an URI. Similarly when I right click and select Copy feature attributes, I get all attribute names, but no values that are URIs. For example, if I do a Copy feature attributes on the following feature (image) copy-attributes.png I only get the following text: fid: 52 identifier: #M4EU.CO_264675 commodity: TREO commodityRank: commodityImportance: mineralOccurrenceName: Aksu Diamas commodityClassifier_uri: mineralOccurrence_uri: specification_uri: endusepotential: representativeCommodity_uri: mineralOccurrenceType_uri: inspire: GB.BGS.EURARE country: TR
