| <b>Description</b>   |             |                                     |
| <p>I've installed the reffunctions plugin that provides a set of new functions that have a help associated</p> <p>When ctrl+click one of the references functions (eg, geomnearest) in an expression, instead of showing its help, QGIS displays the help frame with the following wrong message</p> <div><div> </div><div><i>function help for geomnearest missing</i></div></div> <p>I did not test with custom function created with the function editor. May be worth checking also.</p> |             |                                     |
