Category:	QGIS Server	
Affected QGIS version:	3.0.3	Regression?: No
Operating System:	Windows 7	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 27011
Description		
I have installed QGIS-Server 3.03-1 via osgeo4w-setup-x86.exe on my machine Windows 7. Based on existing tutorials and hints: - I edited httpd.conf and change ScriptAlias /cgi-bin/ "C:\OSGeo4W/bin/" to ScriptAlias /cgi-bin/ "C:\OSGeo4W/apps/qgis/bin/" But I am stuck while trying to run it: - when I opened the url http://localhost/qgis/qgis_mapserv.fcgi.exe?SERVICE=WMS&#38;VERSION=1.3.0&#38;REQUEST=GetCapabilities. I have got an error page in a browser and the following record in apache log file: <pre>[client 127.0.0.1] (OS 109)Přesměrování bylo ukončeno. : mod_fcgid: get overlap result error [error] [client 127.0.0.1] Premature end of script headers: qgis_mapserv.fcgi.exe</pre> What did I wrong and how to force qgis-server to run? Regards, Radim
