

QGIS Application - Feature request #19193
Better display of groups in Items panel (layout mode)

Easy fix?:	No	
Description In the current QGis version (3.0.3), in layout mode, the Items list does not show which items are inside groups. It's also impossible to drag and drop items inside groups. I suggest to make it similar to the map layers panel, in which groups and their content are clearly displayed. Moving items inside or outside of a group with drag and drop in the list is useful too.
