- Status changed from Feedback to Open

Trying several combinations, I'm sure it has not to do with a particular algorithm.

But i think it has to do with my platform (windows 10) and how I close the algs dialog:

place the cursor over QGIS icon on the Windows status bar and using the dialogs preview, close them one by one.

When the last alg dialog is closed, I get the Python error shown above.

It does not occur if only one alg was opened.
