

QGIS Application - Bug report #19224

Qgis crashes when deleting or moving node

2018-06-19 10:25 AM - Maja Polenšek

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Editing	
Affected QGIS version:	3.0.3	Regression?: No
Operating System:	Windows 10 pro	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 27053
Description I am working with polygons (shapefile). I can delete or move few nodes. After that qgis crash. Sometimes it freezes (mouse is working) and does not complete the command. If I close and reopen Qgis it works normal for few moves. At best I can work 5 to 10 minutes before it crashes. Sometimes I can make just 3 changes.		

History

#1 - 2018-06-19 04:44 PM - Martin Dobias

- Status changed from Open to Feedback

Could you please attach the data you have been using?

Ideally if you could also record a short screen recording where it is possible to see how you do the editing...

#2 - 2018-06-20 12:30 PM - Richard Duivenvoorde

Maja sent the shp file to redmine address, I forwarded it to Martin.

If somebody else wants it, let me (Richard) know.

Note: I cannot reproduce the crash here: tried to edit the shapefile by adding features en edit exsisting ones...
(I'm not on Windows though...)

@Maja: can you try to create a fresh 'Profile' in QGIS? So to be sure there are no plugins screwing things up?

#3 - 2018-06-22 01:07 PM - Richard Duivenvoorde

- File Selection_601.png added

Via menu Settings / User Profiles / New Profile, see screenshot

#4 - 2018-08-15 07:55 PM - Giovanni Manghi

- Resolution set to not reproducible

- Status changed from Feedback to Closed

Closing for lack of feedback.
