<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 27056
<b>Description</b>		
<p>In a QGIS project, create a map theme using some of the layers in the project</p> <p>Open the Dxf Export dialog</p> <p>select the map theme option to quickly check the layers to export. Nice.</p> <p>Now, check another layer that is not part of the map theme: the current combination of layer does no longer match the map theme's combination. You'd expect in that case that the map theme combobox shows an empty item. But it keeps showing the selected map theme which is misleading.</p>
