

QGIS Application - Feature request #19250

Layer Properties > Source > Provider feature filter: accept Query which includes global or project variables

2018-06-22 06:06 PM - Garth Fletcher

Status:	Open	Resolution: Copied to github as #: 27078
Priority:	Normal	
Assignee:		
Category:	Expressions	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>At present the Query Builder only supports layer fields in its queries.</p> <p>It would be useful to also be able to reference global or project variables, for example:</p> <pre>"disp_lev" >= @Wshed_disp_lev</pre> <p>where "disp_lev" is a layer variable but @Wshed_disp_lev is a global or project variable.</p> <p>In the above example, the layers consisted of watersheds of which only the top (largest) watersheds should be drawn.</p> <p>Wanted to draw a series of maps starting with L1 (smallest/highest watersheds), L2 (next level in which some L1 watersheds were absorbed into L2 watersheds), L3...</p> <p>@Wshed_disp_lev was used to set which map was being draw, and "disp_lev" to determine whether a watershed in lower levels needed to be drawn...</p>
