I have the same problem here. Also located in Germany.
At least QGIS version 2.x and 3.x are effected.

Yes, the rest in the above directory:

ar, bg, bs, ca, cs, da, el, eo, et, eu, fi, fr, id, is, it, ja, ko, ky, lt, lv, pl, pt_PT, ro, ru, sv, tr, uk, vi, zh-Hans

all work

just to clarify my testing process:

I called QGIS with the --lang parameter (see above) and tried to delete a rectangle in the composer. I referred to the above mentioned directory to see which locales are supported.
