QGIS Application - Bug report #19323
Qgis 3.0/3.2 crash when editing point geopackage layer.

2018-07-03 04:46 PM - Patrick Dunford

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Map Canvas		
Affected QGIS version:	3.0.3	**Regression?:**	No
Operating System:	Debian 9	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	no timely feedback
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	27151

Description

When editing point layer and moving point using the Node tool the software crashes.

Sample data coming.

History

- File bug19323.bz2 added

Open the sample project

There is only one layer "osFeatures"

put this layer in edit mode and select node tool

try dragging the big blue circle you can see to somewhere

The move feature tool doesn't cause a crash
