<b>Description</b>		
<p>I would love to see a button/icon to toggle on/off snapping. The icon should display if it's on or off for quick view. For me, would be important to be displayed if the snapping is on the vertex only, segment also or/and intersection. Another great thing would be to right click on the icon to access snap option.</p> <p>For the mapping I do, I constantly need to turn snap on and off.</p>
