Affected QGIS version:	3.1(master)	**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	invalid	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	27177	

Description

I have used a plugin extensively in the past called Layer Combinations to assist with turning different layers on and off in a panel window depending on the map features were to be displayed using a dropdown menu selection of saved combinations with an easy update button.

I see that the layer combinations has been merged into v3 QGIS, but I can't see this menu when I load the file in my V3 QGIS and it has all my list of combinations to control different styling from the same map.

Maybe I am missing something?
A pointer or two would help.

I think the previous plugin was from here?

- Resolution set to invalid

- Status changed from Open to Closed

This is a plugin issue - you'll need to file with the plugin author.

Hi,

Layer combination features have been merged in QGIS a long time ago; they are present in 2.14 (called "preset visibility" and I think this is why the plugin got no updates for years) and in 3.x they are called "map theme". They are available in the Layers panel toolbar and a description of the feature is available at https://docs.qgis.org/testing/en/docs/user_manual/introduction/general_tools.html#configuring-map-themes

I can't tell how retrieval of your custom combinations may work though...
