Easy fix?: Description

When we select categorize (instead of Single Symbol) there is no option for a single colour, only different colour ramps.

Most often I use categorize so that I can exclude certain features from the canvas and I actually want all the features one colour. So I have to select all the features (Ctrl-A doesn't work??) and right-click change colour.

I shouldn't need to change them all back to the single symbol colour because I didn't want the colour ramp in the first place!

Thanks

- Resolution set to invalid
- Status changed from Open to Closed

You need to lock the symbol layers in the "tree" part of the symbol editor.

In any case this isn't a bug, rather a qgis use question - so more appropriate for stackexchange
