Category:	Browser			
Affected QGIS version:	3.2		**Regression?:**	No
Operating System:	Ubuntu 18.04		**Easy fix?:**	No
Pull Request or Patch supplied:	Yes		**Resolution:**	
Crashes QGIS or corrupts data:	No		**Copied to github as #:**	27232

Description

If PostGIS table (with defined "geoemetry-type" column) constains at least one record storing "MultiPoint" type geometry, it causes that in Browser (Browser -> PostGIS -> database_alias -> public -> geometry_types) a polygon-type entry are not displayed, thus blocking access to this kind of objects.

Removing from database MultiPoint record and refreshing list in Browser -> PostGIS makes this geoemetry visible again.
