QGIS Application - Bug report #19407 QGIS hanging/freezing during extended periods of vector file editing/saving

2018-07-13 04:33 AM - Ben Walsh

Status:ClosedPriority:NormalAssignee:Ben WalshCategory:Vectors

Affected QGIS version:2.14.2 Regression?: No Operating System: Windows 10 Easy fix?: No

Pull Request or Patch shapplied: Resolution: not reproducable

Crashes QGIS or corrupts data: Copied to github as #: 27235

Description

When editing vector files over extended periods, with multiple saves, the application starts to freeze when: saving edits and toggling edit mode. This seems to affect all three versions I use 2.14.22, 2.18 and version 3.

It also consumes 30% of CPU while in hanging state. (i7 6700HQ)
