Revision 7f84b6c1 - 2018-07-29 12:46 AM - Nyal Dawson

Fix crash in network content fetcher when run from non-main thread

Because a QNetworkAccessManager is the parent for all QNetworkReplies created by it, if a reply is created in a thread then we need to ensure that this reply isn't deleted early by destruction of the thread local QgsNetworkAccessManager instance. Work around this by unsetting the parent for the QNetworkReplies owned by QgsNetworkContentFetcher objects.

Fixes #19452
