Revision 7f84b6c1 - 2018-07-29 12:46 AM - Nyall Dawson

Fix crash in network content fetcher when run from non-main thread

Because a QNetworkAccessManager is the parent for all QNetworkReplys created by it, if a reply is created in a thread then we need to ensure that this reply isn't deleted early by destruction of the thread local QgsNetworkAcessManager instance. Work around this by unsetting the parent for the QNetworkReplys owned by QgsNetworkContentFetcher objects.

Fixes #19452
