Hello,

I work under Windows 2007 Pro and with QGIS 2.18.19 (64 bits).

I have a database under Postgresql connected to QGIS.

I created in my database a "Vue" in sql that I call in QGIS. I consult the data of this VUE via the "Attribute Table" tool of QGIS and I switch to form mode.

To make the data more readable, I designed a .ui form. This one I post in QGIS.

My problem is that in form mode .ui, when we select a line it does not appear highlighted.

This problem is not present when we do not go through a form.

Good day and thanks for the help

- *Description updated*

- *Subject changed from Problème dans l'affichage des données en mode formulaire to feature not highlighted when viewed with .ui in attribute table*

#4 - 2019-01-21 12:35 AM - Jürgen Fischer

Please test with QGIS 3.4 - QGIS 2.18 reached its end of life.

#5 - 2019-02-23 12:01 PM - matteo ghetta

Can you provide the `ui` form file?

End of life notice: QGIS 2.18 LTR

Source:

<http://blog.qgis.org/2019/03/09/end-of-life-notice-qgis-2-18-ltr/>

QGIS 3.4 has recently become our new Long Term Release (LTR) version. This is a major step in our history – a long term release version based on the massive updates, library upgrades and improvements that we carried out in the course of the 2.x to 3x upgrade cycle.

We strongly encourage all users who are currently using QGIS 2.18 LTR as their preferred QGIS release to migrate to QGIS 3.4. This new LTR version will receive regular bugfixes for at least one year. It also includes hundreds of new functions, usability improvements, bugfixes, and other goodies. See the relevant changelogs for a good sampling of all the new features that have gone into version 3.4

Most plugins have been either migrated or incorporated into the core QGIS code base.

We strongly discourage the continued use of QGIS 2.18 LTR as it is now officially unsupported, which means we'll not provide any bug fix releases for it.

You should also note that we intend to close all bug tickets referring to the now obsolete LTR version. Original reporters will receive a notification of the ticket closure and are encouraged to check whether the issue persists in the new LTR, **in which case they should reopen the ticket**.

If you would like to better understand the QGIS release roadmap, check out our roadmap page! It outlines the schedule for upcoming releases and will help

you plan your deployment of QGIS into an operational environment.

The development of QGIS 3.4 LTR has been made possible by the work of hundreds of volunteers, by the investments of companies, professionals, and administrations, and by continuous donations and financial support from many of you. We sincerely thank you all and encourage you to collaborate and support the project even more, for the long term improvement and sustainability of the QGIS project.
