| Easy fix?: | Yes | |
| Description | | |
| <p>Please allow to dock the geodesic measurement tool window as a panel in the sidebar, instead of having it flying around and obstructing the map.</p> <p>The panel should then just get the focus ("jump" forward) if it is in a panel group when the measurement tool is clicked.</p> <p>That would greatly improve usability, and fix other issues such as #18924</p> | | |
