QGIS Application - Bug report #19561
Crash while reopening minimized QGIS window.

2018-08-07 04:30 PM - Nicholas Boyko

Status:	Closed		
Priority:	High		
Assignee:			
Category:	GUI		
Affected QGIS version:	3.0.3	**Regression?:**	No
Operating System:	Windows 10 Professional	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	not reproducable
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	27388

Description

User Feedback

I opened the window after having it minimized all weekend

Report Details

Crash ID: 5fe87e1d589013065bc457c1527801c73b2dab97

Stack Trace

```
QgsColorRampShader::shade :

- Priority changed from Low to High

very difficult to test this scenario :)

can you give us more details? what datasources do you use?

#2 - 2018-08-07 04:31 PM - Giovanni Manghi

also update to 3.2

#3 - 2018-08-23 02:12 PM - Nicholas Boyko

I had some rasters relating to LiDAR QC loaded, and had another QGIS window that had other rasters open, each had roughly 2GB of data in memory. The first opened fine, the second crashed on maximizing. I had XYZ tiles loaded in both.

very hard to try replicate indeed. Does it happens regularly? or it was a one time thing? Any difference on 3.2/master?

#5 - 2018-08-23 06:17 PM - Nicholas Boyko

This was a one-time thing, I suspect that it's probably more of a Windows thing, possibly lost track of assigned RAM.

Have not tested 3.2, but I also have not had this issue since. I'll try replicating tomorrow.

#6 - 2018-08-23 08:35 PM - Giovanni Manghi

- Resolution set to not reproducable

- Status changed from Feedback to Closed

Reopen if replicable in a consistent way.
