

QGIS Application - Bug report #19574

Map Composer doesn't load map anymore

2018-08-09 11:29 AM - Magdalena Blank

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Affected QGIS version:	3.2.1	Regression?: No
Operating System:	Windows 64bit	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 27401
Description I use QGIS Version 3.2 and there seems to be a problem with the print composer. I have a project with different prints. On one day I can use them normally (open then, updating, changing) and the other day, the map just shows a grey rectangle and I have to delete the map and add a new map. All the other elements don't show any problem. If this problem occurs, I have to remake every map (luckily the layout stays the same!). This problem is related to all prints.

- Status changed from Open to Feedback

You sure your composer map object is not in "rectangle" mode?

https://docs.qgis.org/2.18/en/docs/user_manual/print_composer/composer_items/composer_map.html#main-properties

if yes just change the property to "render".
