

QGIS Application - Bug report #19593

"Classify" button in graduated symbology may make too small a range

2018-08-10 07:36 PM - Ryan Desmond

<b>Status:</b>	Open	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Symbology	
<b>Affected QGIS version:</b>	3.2.1	<b>Regression?:</b> No
<b>Operating System:</b>	Ubuntu 16.04.5	<b>Easy fix?:</b> Yes
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 27420

Description

Auto-classified ranges that are created on the graduated symbology preference panel may not include features at the extremes of the field used for the ranges.

Procedure

- 1. Load the attached [[attachment:file.zip]] into QGIS
- 2. Open the layer properties / symbology
  - 1. Select "Graduated"
  - 2. Select "val" as the column
  - 3. Select "Classify" to generate 5 classes from the data
- 3. Hit "Okay" to return to the main view

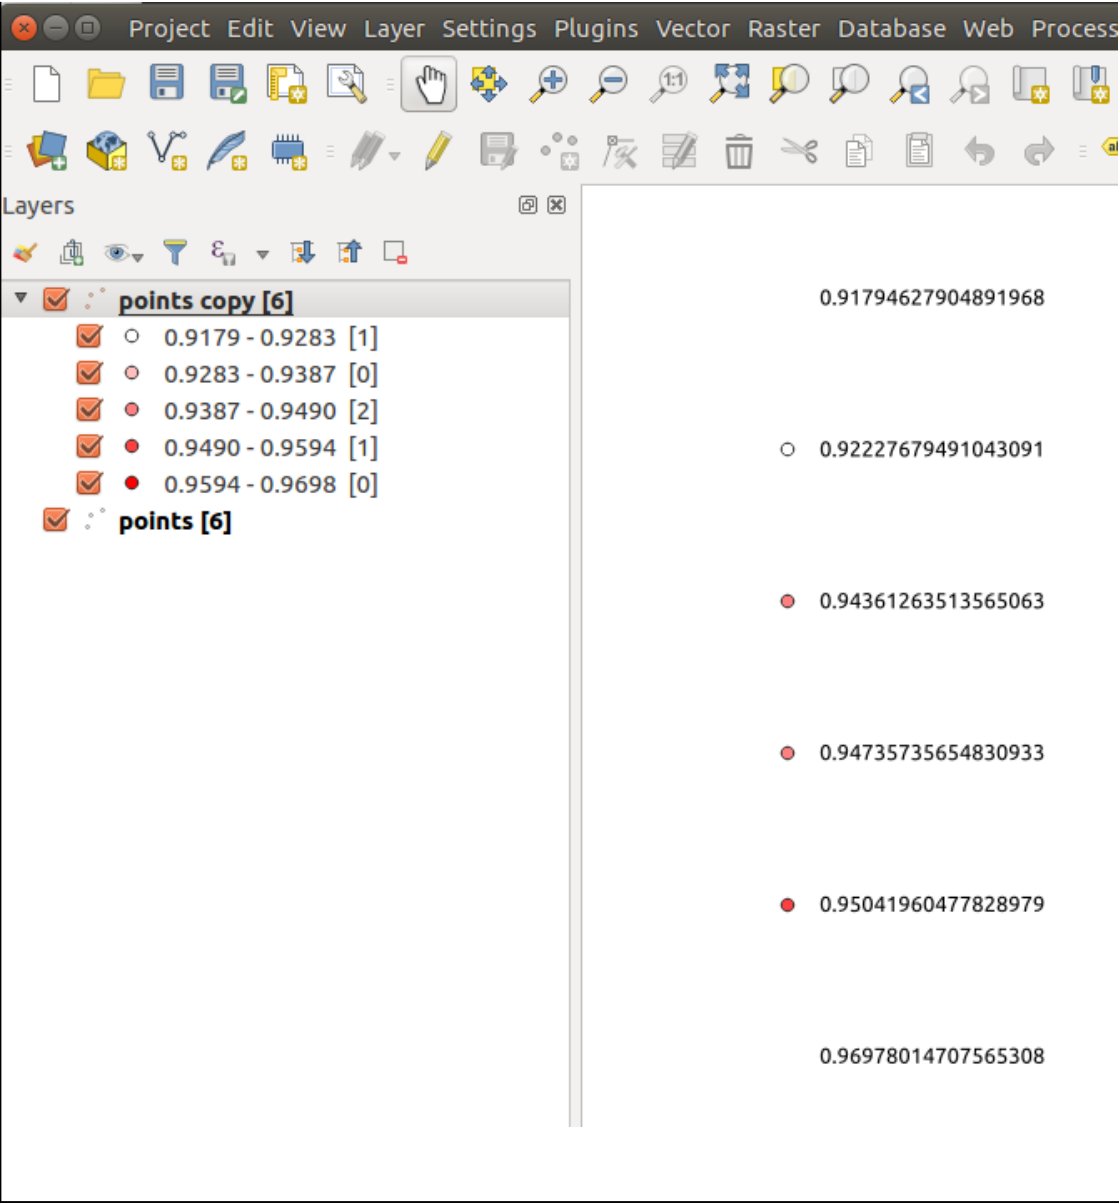

symbology\_properties.png

Expected

When looking at the correct location on the map, all 6 points are visible. Points are located at (0,0) (10,0) (20,0) (30,0) (40,0) (50,0).

Actual

When looking at the correct location on the map, only 4 points are visible. The points with the lowest and highest values are outside of the generated categories and are not displayed. See the attached image (which has a duplicate of the initial layer to show text where the points should be.)
