Pull Request or Patch supplied:	No	**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	27436

Description

As shown in the picture attached, we usually use a color ramp rather than a legend to label a raster DEM layer, so we need a color ramp item that users get a certain gradient symbol based on the selected raster layer. Then users design its aspect(vertical or horizontal), width, height, interval of ticks, number of ticks, and font of number label.
