Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 27510
Description Browsing the algorithms input layer parameter, I realized that there are some algorithms that could support table as input but do not: <ul style="list-style-type: none">- the Extract (by attributes/by expression/selected features) do not allow table while it's possible with their corresponding "select by..." algs- the Export to database algs- the "Basic statistics for fields" while the "statistics by categories" allows it- some of the "vector table" algorithms: "Add unique value index field", "Advanced Python Field calculator"
