<b>Description</b>		
<p>Create a table (no geometry) using the New Temporary scratch Layer dialog</p> <p>Check the layer properties (information tab): it has a crs property filled which is epsg:4326</p> <p>Also in the Source tab, you'll notice that the "Coordinate Reference System" group is enabled and that you can change the crs of the layer and some extents and spatial index. These ones should be disabled</p> <p>This occurs also when you add a non geometric layer using the delimiter text (and I suppose with the open vector dialog)</p>
