Description

When using the placement option from a Data Field the left and right are swapped.
ie, a field that says left puts the label on the right of the point, and vice versa.
Luckily you can just swap it in the table to workaround but it's unintuitive.

Not sure if up and down are swapped.

It does not work as expected, but given that there is a simple workaround, I would classify this as minor

Does that apply to New Symbology?
