

QGIS Application - Feature request #19715

Symbology option: suppress shared polygon boundaries

2018-08-27 07:44 PM - Nathan Perry

Status:	Open	Resolution: Copied to github as #: 27540
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>It would be tremendously useful if the Symbology panel had a built-in option to style polygon features as if they were dissolved; that is, rendering them as a single united polygon with no internal boundaries visible. Currently this is only possible using the collect() function in Geometry Generator, or as a workaround with multiple symbol layers and offset outlines, but is commonly used enough to warrant a core feature.</p> <p>This could be implemented as a check box in the Symbol options for fill-type symbols, perhaps: "Suppress shared polygon boundaries"</p>
