

QGIS Application - Bug report #19761

Unable to close QGIS because of an (ghost?) active task

2018-09-03 07:37 PM - Harrissou Santanna

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Project Loading/Saving	
Affected QGIS version:	3.3(master)	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 27586
Description I'm trying to close QGIS hitting the X button but fail with an "Active Tasks" dialog that pops up stating that Identify features tool is being busy (attached image). Any choice I do in this dialog does not help to close QGIS. Also notice that clicking on the status bar I see the Identify features task in the list but at 100% and, anyway looks like I can't interact with this widget. I finally had to force quit.

Can you reproduce this? I need some more info here.

- Status changed from Feedback to Open

Yes, right now!

Can you tell me the kind of information you need because I'm not sure I did something particular and I'm pretty sure the identify actions are not the latest I do?

#3 - 2018-10-02 03:39 PM - Nyal Dawson

I guess some steps to reproduce would help... I haven't been able to.

It usually happens when we have identified a feature and then then pan/zoom the map to another position.
We only have Postgres connections in place - maybe that's worth to mention.
