Description

User Feedback

QGIS 3.2.0 and 3.2.3 (to which I just upgraded) have started crashing on exit almost every time, I close.

I apparently happens even if I just start QGIS and quit immediately - without opening projects or loading any data.

Can you please if it happens also on master? also try with a new/clean profile.

Looks like an issue with an installed plugin, not qgis itself

#3 - 2018-09-19 08:19 AM - Morten Storm

It actually looks like Nyall hit the nail on the head! Disabling the QGIS Cloud plugin made QGIS quit nicely, while reenabling it got the crash back!

I will report the error to the plugin developer! Thanks for the prompt responses!
