Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 27819
Description		
<p>Zooming in does not really work from the trackpad. I have a macbook air.</p> <p>This seems like a fundamental feature that users will use with basically everything that they do.</p> <p>I am guessing this issue is logged elsewhere, but there wasn't an easy way to search for it.</p> <p>QGIS3 is absolutely amazing. And I am close to thinking I can ditch arcmap and never look back... but doesnt feel quite there yet.</p> <p>Glitchy zooms is part of it.</p> <p>THANKS</p>
